Release Notes of Continuous Delivery

May 05, 2025

 Version 1.3 includes highest priority bugs and continuous delivery (CD) tasks

Here are the key implementations and fixes:

1. On the user list page - updated last login in export when user downloads data
2. Challenge audience counter was displaying count of all community members even when challenge does not target all community members
3. Replies were not disabled on platform
4. When exporting individual evaluation results, the criteria response (numerical) does not display. It does when you do a full export
5. Assigned users were unable to view their completed evaluations on ideas when the stage changes in workflow.

Detailed notes for each task:

1. On the user list page - updated last login in export when user downloads data
 - The export column in the user list export should be displayed in the same format as on the user list page on the platform (ie: 2 days ago, 10 days ago, etc instead of showing full date time)
 - Tested and Verified 
2. Challenge audience counter was displaying count of all community members even when challenge did not target all community members
 - Challenge audience counter now displays the valid number of audience members assigned to the respective challenge
 - Tested and Verified 

3. Replies weren't disabled on our platform when commenting setting updated to 'disabled'
 - On disabling the comment toggle in the challenge setting, the comments & replies is now disabled
 - Tested and Verified 
4. When exporting individual evaluation results, the criteria response (Numerical) was not displayed. It does when you do a full export
 - When a user does an export of an individual evaluation from the "evaluations" modal on an idea, it now incorporates the numerical criteria response in the export
 - Tested and Verified 
5. Assigned users were unable to view their completed evaluations on ideas when the stage changed in workflow
 - The evaluations tab now remains visible to assigned users so they can retroactively view their ratings (it is now visible in all types of stages to appropriate assignees)
 - Tested and Verified
